001 Protocol synopsis

Study purpose

A fictional 12-week observational study of inhaler technique and reminder education in adults with persistent asthma.

Eligibility - potential inclusion

Adults aged 18-65 with clinician-documented asthma and a prescribed maintenance inhaler.

Eligibility - requires clinical review

Pregnancy, recent hospitalization for severe exacerbation, or inability to complete study visits requires study-team review.

Study timeline

Planned visits: Baseline, Weeks 2, 4, 8, and 12. Visit dates are approximate and confirmed by the study coordinator.

Procedures

Inhaler technique demonstration, symptom questionnaire, peak-flow measurement, adherence diary.

Risks and discomforts

Cough, mild dizziness during peak-flow effort, privacy concerns from diary collection.

Participant rights

Participants may stop at any time without affecting their usual care.

Safety boundary

This document is fictional. No independent eligibility, diagnosis, treatment recommendation, or medication adjustment may be made by an AI system. The study coordinator and qualified clinical team review all participant-facing information.

Page-specific coordinator verification item

Checklist item 001: compare the current protocol synopsis information with the approved version, verify every number and timing reference against the source page, and record a human review decision before publication. If a question is outside the documented protocol, tell the participant to contact the study team. No patient-identifying data is included in this synthetic example.

002 Study rationale and objectives

Participant rights

Participants may stop at any time without affecting their usual care.

Safety boundary

This document is fictional. No independent eligibility, diagnosis, treatment recommendation, or medication adjustment may be made by an AI system. The study coordinator and qualified clinical team review all participant-facing information.

Study purpose

A fictional 12-week observational study of inhaler technique and reminder education in adults with persistent asthma.

Eligibility - potential inclusion

Adults aged 18-65 with clinician-documented asthma and a prescribed maintenance inhaler.

Eligibility - requires clinical review

Pregnancy, recent hospitalization for severe exacerbation, or inability to complete study visits requires study-team review.

Study timeline

Planned visits: Baseline, Weeks 2, 4, 8, and 12. Visit dates are approximate and confirmed by the study coordinator.

Procedures

Inhaler technique demonstration, symptom questionnaire, peak-flow measurement, adherence diary.

Risks and discomforts

Cough, mild dizziness during peak-flow effort, privacy concerns from diary collection.

Page-specific coordinator verification item

Checklist item 002: compare the current study rationale and objectives information with the approved version, verify every number and timing reference against the source page, and record a human review decision before publication. If a question is outside the documented protocol, tell the participant to contact the study team. No patient-identifying data is included in this synthetic example.

003 Design and participant flow

Eligibility - potential inclusion

Adults aged 18-65 with clinician-documented asthma and a prescribed maintenance inhaler.

Eligibility - requires clinical review

Pregnancy, recent hospitalization for severe exacerbation, or inability to complete study visits requires study-team review.

Study timeline

Planned visits: Baseline, Weeks 2, 4, 8, and 12. Visit dates are approximate and confirmed by the study coordinator.

Procedures

Inhaler technique demonstration, symptom questionnaire, peak-flow measurement, adherence diary.

Risks and discomforts

Cough, mild dizziness during peak-flow effort, privacy concerns from diary collection.

Participant rights

Participants may stop at any time without affecting their usual care.

Safety boundary

This document is fictional. No independent eligibility, diagnosis, treatment recommendation, or medication adjustment may be made by an AI system. The study coordinator and qualified clinical team review all participant-facing information.

Study purpose

A fictional 12-week observational study of inhaler technique and reminder education in adults with persistent asthma.

Page-specific coordinator verification item

Checklist item 003: compare the current design and participant flow information with the approved version, verify every number and timing reference against the source page, and record a human review decision before publication. If a question is outside the documented protocol, tell the participant to contact the study team. No patient-identifying data is included in this synthetic example.

004 Recruitment and consent

Procedures

Inhaler technique demonstration, symptom questionnaire, peak-flow measurement, adherence diary.

Risks and discomforts

Cough, mild dizziness during peak-flow effort, privacy concerns from diary collection.

Participant rights

Participants may stop at any time without affecting their usual care.

Safety boundary

This document is fictional. No independent eligibility, diagnosis, treatment recommendation, or medication adjustment may be made by an AI system. The study coordinator and qualified clinical team review all participant-facing information.

Study purpose

A fictional 12-week observational study of inhaler technique and reminder education in adults with persistent asthma.

Eligibility - potential inclusion

Adults aged 18-65 with clinician-documented asthma and a prescribed maintenance inhaler.

Eligibility - requires clinical review

Pregnancy, recent hospitalization for severe exacerbation, or inability to complete study visits requires study-team review.

Study timeline

Planned visits: Baseline, Weeks 2, 4, 8, and 12. Visit dates are approximate and confirmed by the study coordinator.

Page-specific coordinator verification item

Checklist item 004: compare the current recruitment and consent information with the approved version, verify every number and timing reference against the source page, and record a human review decision before publication. If a question is outside the documented protocol, tell the participant to contact the study team. No patient-identifying data is included in this synthetic example.

005 Inclusion criteria

Safety boundary

This document is fictional. No independent eligibility, diagnosis, treatment recommendation, or medication adjustment may be made by an AI system. The study coordinator and qualified clinical team review all participant-facing information.

Study purpose

A fictional 12-week observational study of inhaler technique and reminder education in adults with persistent asthma.

Eligibility - potential inclusion

Adults aged 18-65 with clinician-documented asthma and a prescribed maintenance inhaler.

Eligibility - requires clinical review

Pregnancy, recent hospitalization for severe exacerbation, or inability to complete study visits requires study-team review.

Study timeline

Planned visits: Baseline, Weeks 2, 4, 8, and 12. Visit dates are approximate and confirmed by the study coordinator.

Procedures

Inhaler technique demonstration, symptom questionnaire, peak-flow measurement, adherence diary.

Risks and discomforts

Cough, mild dizziness during peak-flow effort, privacy concerns from diary collection.

Participant rights

Participants may stop at any time without affecting their usual care.

Page-specific coordinator verification item

Checklist item 005: compare the current inclusion criteria information with the approved version, verify every number and timing reference against the source page, and record a human review decision before publication. If a question is outside the documented protocol, tell the participant to contact the study team. No patient-identifying data is included in this synthetic example.

006 Exclusion criteria

Eligibility - requires clinical review

Pregnancy, recent hospitalization for severe exacerbation, or inability to complete study visits requires study-team review.

Study timeline

Planned visits: Baseline, Weeks 2, 4, 8, and 12. Visit dates are approximate and confirmed by the study coordinator.

Procedures

Inhaler technique demonstration, symptom questionnaire, peak-flow measurement, adherence diary.

Risks and discomforts

Cough, mild dizziness during peak-flow effort, privacy concerns from diary collection.

Participant rights

Participants may stop at any time without affecting their usual care.

Safety boundary

This document is fictional. No independent eligibility, diagnosis, treatment recommendation, or medication adjustment may be made by an AI system. The study coordinator and qualified clinical team review all participant-facing information.

Study purpose

A fictional 12-week observational study of inhaler technique and reminder education in adults with persistent asthma.

Eligibility - potential inclusion

Adults aged 18-65 with clinician-documented asthma and a prescribed maintenance inhaler.

Page-specific coordinator verification item

Checklist item 006: compare the current exclusion criteria information with the approved version, verify every number and timing reference against the source page, and record a human review decision before publication. If a question is outside the documented protocol, tell the participant to contact the study team. No patient-identifying data is included in this synthetic example.

007 Screening assessments

Risks and discomforts

Cough, mild dizziness during peak-flow effort, privacy concerns from diary collection.

Participant rights

Participants may stop at any time without affecting their usual care.

Safety boundary

This document is fictional. No independent eligibility, diagnosis, treatment recommendation, or medication adjustment may be made by an AI system. The study coordinator and qualified clinical team review all participant-facing information.

Study purpose

A fictional 12-week observational study of inhaler technique and reminder education in adults with persistent asthma.

Eligibility - potential inclusion

Adults aged 18-65 with clinician-documented asthma and a prescribed maintenance inhaler.

Eligibility - requires clinical review

Pregnancy, recent hospitalization for severe exacerbation, or inability to complete study visits requires study-team review.

Study timeline

Planned visits: Baseline, Weeks 2, 4, 8, and 12. Visit dates are approximate and confirmed by the study coordinator.

Procedures

Inhaler technique demonstration, symptom questionnaire, peak-flow measurement, adherence diary.

Page-specific coordinator verification item

Checklist item 007: compare the current screening assessments information with the approved version, verify every number and timing reference against the source page, and record a human review decision before publication. If a question is outside the documented protocol, tell the participant to contact the study team. No patient-identifying data is included in this synthetic example.

008 Visit schedule

Study purpose

A fictional 12-week observational study of inhaler technique and reminder education in adults with persistent asthma.

Eligibility - potential inclusion

Adults aged 18-65 with clinician-documented asthma and a prescribed maintenance inhaler.

Eligibility - requires clinical review

Pregnancy, recent hospitalization for severe exacerbation, or inability to complete study visits requires study-team review.

Study timeline

Planned visits: Baseline, Weeks 2, 4, 8, and 12. Visit dates are approximate and confirmed by the study coordinator.

Procedures

Inhaler technique demonstration, symptom questionnaire, peak-flow measurement, adherence diary.

Risks and discomforts

Cough, mild dizziness during peak-flow effort, privacy concerns from diary collection.

Participant rights

Participants may stop at any time without affecting their usual care.

Safety boundary

This document is fictional. No independent eligibility, diagnosis, treatment recommendation, or medication adjustment may be made by an AI system. The study coordinator and qualified clinical team review all participant-facing information.

Page-specific coordinator verification item

Checklist item 008: compare the current visit schedule information with the approved version, verify every number and timing reference against the source page, and record a human review decision before publication. If a question is outside the documented protocol, tell the participant to contact the study team. No patient-identifying data is included in this synthetic example.

009 Study procedures

Study timeline

Planned visits: Baseline, Weeks 2, 4, 8, and 12. Visit dates are approximate and confirmed by the study coordinator.

Procedures

Inhaler technique demonstration, symptom questionnaire, peak-flow measurement, adherence diary.

Risks and discomforts

Cough, mild dizziness during peak-flow effort, privacy concerns from diary collection.

Participant rights

Participants may stop at any time without affecting their usual care.

Safety boundary

This document is fictional. No independent eligibility, diagnosis, treatment recommendation, or medication adjustment may be made by an AI system. The study coordinator and qualified clinical team review all participant-facing information.

Study purpose

A fictional 12-week observational study of inhaler technique and reminder education in adults with persistent asthma.

Eligibility - potential inclusion

Adults aged 18-65 with clinician-documented asthma and a prescribed maintenance inhaler.

Eligibility - requires clinical review

Pregnancy, recent hospitalization for severe exacerbation, or inability to complete study visits requires study-team review.

Page-specific coordinator verification item

Checklist item 009: compare the current study procedures information with the approved version, verify every number and timing reference against the source page, and record a human review decision before publication. If a question is outside the documented protocol, tell the participant to contact the study team. No patient-identifying data is included in this synthetic example.

010 Participant communication

Participant rights

Participants may stop at any time without affecting their usual care.

Safety boundary

This document is fictional. No independent eligibility, diagnosis, treatment recommendation, or medication adjustment may be made by an AI system. The study coordinator and qualified clinical team review all participant-facing information.

Study purpose

A fictional 12-week observational study of inhaler technique and reminder education in adults with persistent asthma.

Eligibility - potential inclusion

Adults aged 18-65 with clinician-documented asthma and a prescribed maintenance inhaler.

Eligibility - requires clinical review

Pregnancy, recent hospitalization for severe exacerbation, or inability to complete study visits requires study-team review.

Study timeline

Planned visits: Baseline, Weeks 2, 4, 8, and 12. Visit dates are approximate and confirmed by the study coordinator.

Procedures

Inhaler technique demonstration, symptom questionnaire, peak-flow measurement, adherence diary.

Risks and discomforts

Cough, mild dizziness during peak-flow effort, privacy concerns from diary collection.

Page-specific coordinator verification item

Checklist item 010: compare the current participant communication information with the approved version, verify every number and timing reference against the source page, and record a human review decision before publication. If a question is outside the documented protocol, tell the participant to contact the study team. No patient-identifying data is included in this synthetic example.

011 Safety monitoring

Eligibility - potential inclusion

Adults aged 18-65 with clinician-documented asthma and a prescribed maintenance inhaler.

Eligibility - requires clinical review

Pregnancy, recent hospitalization for severe exacerbation, or inability to complete study visits requires study-team review.

Study timeline

Planned visits: Baseline, Weeks 2, 4, 8, and 12. Visit dates are approximate and confirmed by the study coordinator.

Procedures

Inhaler technique demonstration, symptom questionnaire, peak-flow measurement, adherence diary.

Risks and discomforts

Cough, mild dizziness during peak-flow effort, privacy concerns from diary collection.

Participant rights

Participants may stop at any time without affecting their usual care.

Safety boundary

This document is fictional. No independent eligibility, diagnosis, treatment recommendation, or medication adjustment may be made by an AI system. The study coordinator and qualified clinical team review all participant-facing information.

Study purpose

A fictional 12-week observational study of inhaler technique and reminder education in adults with persistent asthma.

Page-specific coordinator verification item

Checklist item 011: compare the current safety monitoring information with the approved version, verify every number and timing reference against the source page, and record a human review decision before publication. If a question is outside the documented protocol, tell the participant to contact the study team. No patient-identifying data is included in this synthetic example.

012 Adverse event documentation

Procedures

Inhaler technique demonstration, symptom questionnaire, peak-flow measurement, adherence diary.

Risks and discomforts

Cough, mild dizziness during peak-flow effort, privacy concerns from diary collection.

Participant rights

Participants may stop at any time without affecting their usual care.

Safety boundary

This document is fictional. No independent eligibility, diagnosis, treatment recommendation, or medication adjustment may be made by an AI system. The study coordinator and qualified clinical team review all participant-facing information.

Study purpose

A fictional 12-week observational study of inhaler technique and reminder education in adults with persistent asthma.

Eligibility - potential inclusion

Adults aged 18-65 with clinician-documented asthma and a prescribed maintenance inhaler.

Eligibility - requires clinical review

Pregnancy, recent hospitalization for severe exacerbation, or inability to complete study visits requires study-team review.

Study timeline

Planned visits: Baseline, Weeks 2, 4, 8, and 12. Visit dates are approximate and confirmed by the study coordinator.

Page-specific coordinator verification item

Checklist item 012: compare the current adverse event documentation information with the approved version, verify every number and timing reference against the source page, and record a human review decision before publication. If a question is outside the documented protocol, tell the participant to contact the study team. No patient-identifying data is included in this synthetic example.

013 Privacy and data handling

Safety boundary

This document is fictional. No independent eligibility, diagnosis, treatment recommendation, or medication adjustment may be made by an AI system. The study coordinator and qualified clinical team review all participant-facing information.

Study purpose

A fictional 12-week observational study of inhaler technique and reminder education in adults with persistent asthma.

Eligibility - potential inclusion

Adults aged 18-65 with clinician-documented asthma and a prescribed maintenance inhaler.

Eligibility - requires clinical review

Pregnancy, recent hospitalization for severe exacerbation, or inability to complete study visits requires study-team review.

Study timeline

Planned visits: Baseline, Weeks 2, 4, 8, and 12. Visit dates are approximate and confirmed by the study coordinator.

Procedures

Inhaler technique demonstration, symptom questionnaire, peak-flow measurement, adherence diary.

Risks and discomforts

Cough, mild dizziness during peak-flow effort, privacy concerns from diary collection.

Participant rights

Participants may stop at any time without affecting their usual care.

Page-specific coordinator verification item

Checklist item 013: compare the current privacy and data handling information with the approved version, verify every number and timing reference against the source page, and record a human review decision before publication. If a question is outside the documented protocol, tell the participant to contact the study team. No patient-identifying data is included in this synthetic example.

014 Protocol deviations

Eligibility - requires clinical review

Pregnancy, recent hospitalization for severe exacerbation, or inability to complete study visits requires study-team review.

Study timeline

Planned visits: Baseline, Weeks 2, 4, 8, and 12. Visit dates are approximate and confirmed by the study coordinator.

Procedures

Inhaler technique demonstration, symptom questionnaire, peak-flow measurement, adherence diary.

Risks and discomforts

Cough, mild dizziness during peak-flow effort, privacy concerns from diary collection.

Participant rights

Participants may stop at any time without affecting their usual care.

Safety boundary

This document is fictional. No independent eligibility, diagnosis, treatment recommendation, or medication adjustment may be made by an AI system. The study coordinator and qualified clinical team review all participant-facing information.

Study purpose

A fictional 12-week observational study of inhaler technique and reminder education in adults with persistent asthma.

Eligibility - potential inclusion

Adults aged 18-65 with clinician-documented asthma and a prescribed maintenance inhaler.

Page-specific coordinator verification item

Checklist item 014: compare the current protocol deviations information with the approved version, verify every number and timing reference against the source page, and record a human review decision before publication. If a question is outside the documented protocol, tell the participant to contact the study team. No patient-identifying data is included in this synthetic example.

015 Coordinator review and approvals

Risks and discomforts

Cough, mild dizziness during peak-flow effort, privacy concerns from diary collection.

Participant rights

Participants may stop at any time without affecting their usual care.

Safety boundary

This document is fictional. No independent eligibility, diagnosis, treatment recommendation, or medication adjustment may be made by an AI system. The study coordinator and qualified clinical team review all participant-facing information.

Study purpose

A fictional 12-week observational study of inhaler technique and reminder education in adults with persistent asthma.

Eligibility - potential inclusion

Adults aged 18-65 with clinician-documented asthma and a prescribed maintenance inhaler.

Eligibility - requires clinical review

Pregnancy, recent hospitalization for severe exacerbation, or inability to complete study visits requires study-team review.

Study timeline

Planned visits: Baseline, Weeks 2, 4, 8, and 12. Visit dates are approximate and confirmed by the study coordinator.

Procedures

Inhaler technique demonstration, symptom questionnaire, peak-flow measurement, adherence diary.

Page-specific coordinator verification item

Checklist item 015: compare the current coordinator review and approvals information with the approved version, verify every number and timing reference against the source page, and record a human review decision before publication. If a question is outside the documented protocol, tell the participant to contact the study team. No patient-identifying data is included in this synthetic example.

016 Participant withdrawal

Study purpose

A fictional 12-week observational study of inhaler technique and reminder education in adults with persistent asthma.

Eligibility - potential inclusion

Adults aged 18-65 with clinician-documented asthma and a prescribed maintenance inhaler.

Eligibility - requires clinical review

Pregnancy, recent hospitalization for severe exacerbation, or inability to complete study visits requires study-team review.

Study timeline

Planned visits: Baseline, Weeks 2, 4, 8, and 12. Visit dates are approximate and confirmed by the study coordinator.

Procedures

Inhaler technique demonstration, symptom questionnaire, peak-flow measurement, adherence diary.

Risks and discomforts

Cough, mild dizziness during peak-flow effort, privacy concerns from diary collection.

Participant rights

Participants may stop at any time without affecting their usual care.

Safety boundary

This document is fictional. No independent eligibility, diagnosis, treatment recommendation, or medication adjustment may be made by an AI system. The study coordinator and qualified clinical team review all participant-facing information.

Page-specific coordinator verification item

Checklist item 016: compare the current participant withdrawal information with the approved version, verify every number and timing reference against the source page, and record a human review decision before publication. If a question is outside the documented protocol, tell the participant to contact the study team. No patient-identifying data is included in this synthetic example.

017 Data quality and verification

Study timeline

Planned visits: Baseline, Weeks 2, 4, 8, and 12. Visit dates are approximate and confirmed by the study coordinator.

Procedures

Inhaler technique demonstration, symptom questionnaire, peak-flow measurement, adherence diary.

Risks and discomforts

Cough, mild dizziness during peak-flow effort, privacy concerns from diary collection.

Participant rights

Participants may stop at any time without affecting their usual care.

Safety boundary

This document is fictional. No independent eligibility, diagnosis, treatment recommendation, or medication adjustment may be made by an AI system. The study coordinator and qualified clinical team review all participant-facing information.

Study purpose

A fictional 12-week observational study of inhaler technique and reminder education in adults with persistent asthma.

Eligibility - potential inclusion

Adults aged 18-65 with clinician-documented asthma and a prescribed maintenance inhaler.

Eligibility - requires clinical review

Pregnancy, recent hospitalization for severe exacerbation, or inability to complete study visits requires study-team review.

Page-specific coordinator verification item

Checklist item 017: compare the current data quality and verification information with the approved version, verify every number and timing reference against the source page, and record a human review decision before publication. If a question is outside the documented protocol, tell the participant to contact the study team. No patient-identifying data is included in this synthetic example.

018 Analysis plan

Participant rights

Participants may stop at any time without affecting their usual care.

Safety boundary

This document is fictional. No independent eligibility, diagnosis, treatment recommendation, or medication adjustment may be made by an AI system. The study coordinator and qualified clinical team review all participant-facing information.

Study purpose

A fictional 12-week observational study of inhaler technique and reminder education in adults with persistent asthma.

Eligibility - potential inclusion

Adults aged 18-65 with clinician-documented asthma and a prescribed maintenance inhaler.

Eligibility - requires clinical review

Pregnancy, recent hospitalization for severe exacerbation, or inability to complete study visits requires study-team review.

Study timeline

Planned visits: Baseline, Weeks 2, 4, 8, and 12. Visit dates are approximate and confirmed by the study coordinator.

Procedures

Inhaler technique demonstration, symptom questionnaire, peak-flow measurement, adherence diary.

Risks and discomforts

Cough, mild dizziness during peak-flow effort, privacy concerns from diary collection.

Page-specific coordinator verification item

Checklist item 018: compare the current analysis plan information with the approved version, verify every number and timing reference against the source page, and record a human review decision before publication. If a question is outside the documented protocol, tell the participant to contact the study team. No patient-identifying data is included in this synthetic example.

019 Operational checklists

Eligibility - potential inclusion

Adults aged 18-65 with clinician-documented asthma and a prescribed maintenance inhaler.

Eligibility - requires clinical review

Pregnancy, recent hospitalization for severe exacerbation, or inability to complete study visits requires study-team review.

Study timeline

Planned visits: Baseline, Weeks 2, 4, 8, and 12. Visit dates are approximate and confirmed by the study coordinator.

Procedures

Inhaler technique demonstration, symptom questionnaire, peak-flow measurement, adherence diary.

Risks and discomforts

Cough, mild dizziness during peak-flow effort, privacy concerns from diary collection.

Participant rights

Participants may stop at any time without affecting their usual care.

Safety boundary

This document is fictional. No independent eligibility, diagnosis, treatment recommendation, or medication adjustment may be made by an AI system. The study coordinator and qualified clinical team review all participant-facing information.

Study purpose

A fictional 12-week observational study of inhaler technique and reminder education in adults with persistent asthma.

Page-specific coordinator verification item

Checklist item 019: compare the current operational checklists information with the approved version, verify every number and timing reference against the source page, and record a human review decision before publication. If a question is outside the documented protocol, tell the participant to contact the study team. No patient-identifying data is included in this synthetic example.

020 Study training and competency

Procedures

Inhaler technique demonstration, symptom questionnaire, peak-flow measurement, adherence diary.

Risks and discomforts

Cough, mild dizziness during peak-flow effort, privacy concerns from diary collection.

Participant rights

Participants may stop at any time without affecting their usual care.

Safety boundary

This document is fictional. No independent eligibility, diagnosis, treatment recommendation, or medication adjustment may be made by an AI system. The study coordinator and qualified clinical team review all participant-facing information.

Study purpose

A fictional 12-week observational study of inhaler technique and reminder education in adults with persistent asthma.

Eligibility - potential inclusion

Adults aged 18-65 with clinician-documented asthma and a prescribed maintenance inhaler.

Eligibility - requires clinical review

Pregnancy, recent hospitalization for severe exacerbation, or inability to complete study visits requires study-team review.

Study timeline

Planned visits: Baseline, Weeks 2, 4, 8, and 12. Visit dates are approximate and confirmed by the study coordinator.

Page-specific coordinator verification item

Checklist item 020: compare the current study training and competency information with the approved version, verify every number and timing reference against the source page, and record a human review decision before publication. If a question is outside the documented protocol, tell the participant to contact the study team. No patient-identifying data is included in this synthetic example.
